INTRODUCTION

Planning at every stage—be it the formulation of a plan, or its implementation or the measurement of its progress or the evaluation of results, requires a great variety of statistics. In the first instance, the Directorate of Economics and Statistics, Rajasthan, took stock of the available statistical data and presented a bird's eye view of the picture by placing together the relevant statistics in its publication 'Basic Statistics'. Ever since the first issue of this publication, a hope was expressed that the Statistical Abstract of Rajasthan would soon be released to satisfy the needs of those who wish to have comprehensive and detailed statistical data. While we have brought out four issues of the publication 'Basic Statistics', due to certain unavoidable reasons more particularly the delays in printing, we could not bring out earlier, the Statistical Abstract of Rajasthan. We are now happy to release this publication on this auspicious day in our country, which marks the celebration of the Republic Day.

Unlike many other Statistical Abstracts, the Statistical Abstract of Rajasthan is planned to fulfil the needs of making available comprehensive and detailed information at one place relating to the economic and social life in the State. With the establishment of the people's democracy at lower levels of Districts and Tehsils, the demand for statistical data was anticipated for these levels, and consequently, the present Statistical Abstract is so designed that for most of the tables districtwise information is given. For those interested in knowing the progress over years we have included information for the State as a whole for the preceding five years wherever it has been available. As successive editions of this publication are brought out in future, it shall be possible to compare the progress in districts over time as well. Further, statistical data on quite a number of series included in this Abstract are being published for the first time and the data has been lying in the Government records. Such data has acquired increased significance and statistical value through the processing done in the Directorate and the information now published, as far as practicable, has been made to relate to certain comparable concepts and definitions. However, since this is the first attempt to bring out the Abstract of the State, the presentation of the statistical data, both in content and form, is necessarily experimental. We shall be constantly engaging ourselves in improving both the coverage and quality of the data. The source of information quoted at the foot of the tables indicates either the earlier published source from which this data has been abstracted or the source of supply of information, if the data has not been published earlier.

It has been possible to bring out this publication with the active cooperation of the various Departments of the Government and for the assistance rendered in the supply of the material required for the preparation of this Abstract we are grateful to them. It shall much facilitate the improvement of the future editions of this publication if the Heads of Departments go through the tables relating to them and suggest improvements. We shall also look forward for constructive suggestions from the readers who are also requested to indicate their needs of detailed statistical data which cannot be met from publications other than this so that we could endeavour in our future editions to include such data.
